

User Guide

kwikSynCh

A: Input Connector

(A) is a standard USB Male connector. (A) can be plugged into any USB power source, such as a PC/Mac, USB Car Adapter or USB Wall Adapter. When plugged into a PC/Mac, (A) also provides a USB 2.0 data connection.

B: Power/Data Output Connector

(B) delivers both power and USB 2.0 data. Plug any USB mTip* into (B). Use this output for charging, as well as for syncing and connecting data devices. (B) is also compatible with any standard USB accessory, such as flash drives, card readers and wireless adapters.

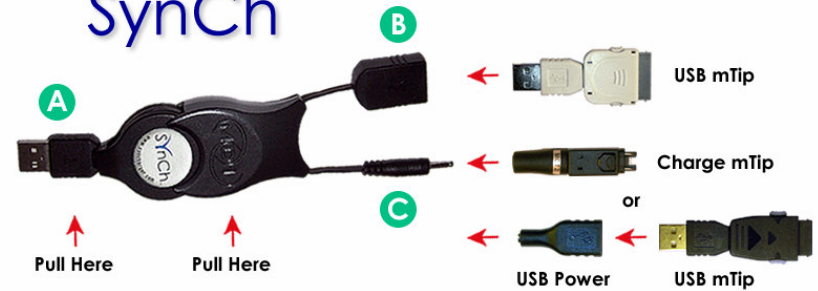

C: Power Only Output Connector

(C) is power only. Plug any USB mTip into (C). Use this output for charging a second device. Note that some devices, such as iPods, must be connected to (B) in order to charge, and will not charge when connected to (C). If you encounter a problem when charging your device from (C), please try charging from (B) before contacting MDI Customer Service.

*Some mTips are for power or data only, while others provide both power and data. The functionality of each mTip is listed on the website.

SynCh

Connectors

(A), (B) and (C) function similarly as with the kwikSynCh. Please refer to the kwikSynCh instructions for an explanation of function.

Two types of mTips: Charge and USB

Charge mTips connect to the Power port (C) and USB mTips connect to the USB port (B). All mTips are available in USB style, while a selection of the most popular mTips are also available in Charge style.

Connecting two USB mTips

mTip USB Power converts (C) to USB, allowing two USB mTips to be connected at the same time. Note that USB Power is for power / charging only. To sync or transfer data, connect to (B).

Connecting without an mTip

Power port (C) is designed to fit many brands of cellphones and other devices directly, without requiring an mTip. Please see the website for more information.

Use two hands

To extend the SynCh cable, pull from both ends at the same time (one hand on the case and the other hand on (A), as shown by the arrows). To rewind, pull the cable half a click, and it will retract.
